

WELLINGTON I.T. JOB MARKET UPDATE

The Wellington market continues to see a strong demand for highly skilled technologists with a recent focus across; development, data engineering, DevOps, automation testing and SCRUM Masters.

With a number of larger projects ramping up in the private sector, coupled with a number of newer initiatives filtering through into the technology teams for government, we have seen a focus on contract requirements within the Wellington market.

What we have also seen is a shift to delivering these projects and programmes of work in an Agile fashion which has led to the increase in SCRUM Master and Agile type resources to drive these engineering teams to deliver. Whilst good project management resources are still in demand, we have seen an overall dip in demand as a result.

Going forward, we will continue to see the Wellington market demand technical talent to meet various project demands across both the Government and Private sectors.

I.T. JOB MARKET Key Points & Trends

Organisations are making an effort to reduce contractor headcount.

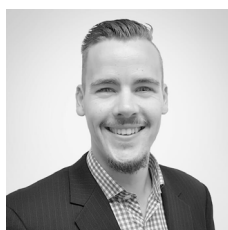

Digital transformations and consumer engagement and behaviour changes.

Agile-based skills, driven by the need to improve communication, oversight of projects and speed to market.

Automation of traditional manual tasks through DevOps & Automation Testing.
